Cleaning Consultancy Delft

Consultancy

With our consultants we offer support, consultancy and inspections for both small one-off projects and larger continuing projects. The consultancy can be based on one of our standard approaches or on your requests and problems. For a complete survey of the production process, a more global approach is used. For troubleshooting we offer tailor-made solutions

Keywords: process and quality improvement, RABC, ISO 9000, auditing, mediation

Measuring equipment

We offer a varied program of measuring equipment which consists of equipment that is either designed ourselves or is carefully selected. We are able to anticipate specific requirements. Our equipment is unique in its area of application. Our products are optimized for use in specific environments like industrial laundries. Because of the versatility, many products may be used in other areas of application.

Keywords: TRA (tristimulus reflection analyzer), TRM (temperature module)

Testing materials

A broad range of testing materials especially designed for evaluation of industrial and advanced cleaning methods. Main products are for testing dirt and stain removal, shrinkage, chemical and mechanical damage, hygiene testing. Using our test materials you will be able to optimize your cleaning processes.

Keywords: Industrial Cleaning Monitor, Disinfection controller, Rodac-plates

Research

By combining many years of experience with the latest technological developments we are able to offer you many research possibilities. Research is performed for individual companies and for organisations like dry cleaner and laundry associations. Our main field of expertise is research aimed at a practical, technological level and the evaluation of new products or new processes against current standards.

Keywords: product testing, microbiology, process evaluation, environmental solutions

Coaching & Training

We offer a variety of training courses and separate training modules. These courses are based on our experience and have a practical approach. Main topics are process control, product testing, microbiology & hygiene, laundry technology. We also give lectures and workshops on current topics, both in- or outside The Netherlands.

Keywords: in company, workshops, custom made modules, brainstorming sessions
